

When is this all happening?

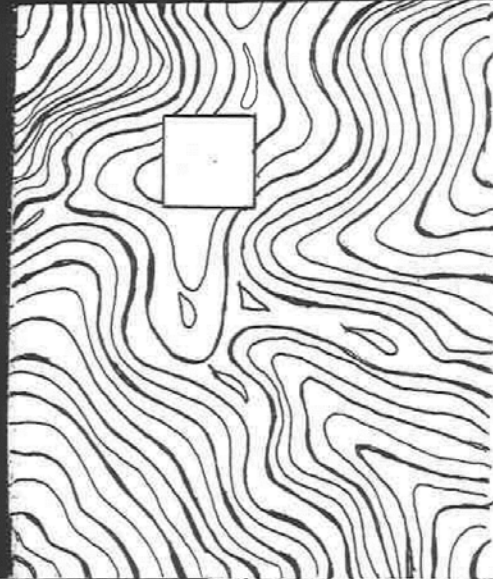

In 2022, the spacecraft will launch. After that, the craft will fly by Mars in 2023. In 2026, the craft will enter the orbit of the asteroid, and stay there for 21 months, ending in 2027. You're here for the beginning of a 10-year journey!

What's your fingerprint?

a little ZINE filled with what You need to KNOW about...

oh, and You can COLOR in it, too!

PSYCHE

Why an asteroid?

Well, Psyche can help us understand how planets are formed. Psyche might be a planetary core of its own (maybe like Earth's) or unmelted material of iron and nickel. Either way, we can learn a lot!

Psyche is two things:
① an asteroid orbiting the sun between Mars and Jupiter.
② the name of the space mission to that asteroid.

So, what is Psyche?
